

LEHD Origin-Destination Employment Statistics (LODES) Dataset Structure Format Version 7.5

Introduction

The LEHD Origin-Destination Employment Statistics (LODES) datasets are released both as part of the OnTheMap application and in raw form as a set of comma separated variable (CSV) text files. This document describes the structure of those raw files and provides basic information for users who want to perform analytical work on the data outside of the OnTheMap application.

File Organization

At the root distribution level, each state (or state-equivalent) has a directory named by its lowercase, 2-letter postal code. Within each state directory are directories of data as well as metadata and geography files for the state. These are described below.

Data Files

The CSV data files are released at the state level and they are organized into three groups within each state. The three groups of files are named as follows, according to their contents:

- OD** – Origin-Destination data, jobs totals are associated with both a home Census Block and a work Census Block
- RAC** – Residence Area Characteristic data, jobs are totaled by home Census Block
- WAC** – Workplace Area Characteristic data, jobs are totaled by work Census Block

Metadata Files and Geography

Within the state directory are two text files. One is a version document, called “version.txt”, and the other is a “checksum” file. Also in the state directory is a geographic relationship file (referred to here as a “geography crosswalk”).

The version file contains information about the state, the data vintage, and the format version. The “data vintage” is an eight character code based on the date the data were prepared for release; it is in the form of YYYYMMDD.¹ New or corrected data may cause newer vintages of data to be released. Only files that have new or changed data will be included in future vintages. The “format version” is a number that refers to file organization and structure of the data release and is fully defined by this document. Restructuring of the existing data into different file formats or a different organization structure would result in a change in the format version.

The checksum file in each state directory is an SHA256SUM file, called “lodes_[ST].sha256sum” where [ST] is the respective state postal code. With the correct software tools, the SHA256SUM file can be used to check that the individual data files were downloaded without any file corruption or loss of data. Further information on SHA256SUM can be found at en.wikipedia.org/wiki/SHA-2.

¹ Note: The data vintage is *not* the same as the createdate provided within the data files. The createdate refers to an internal processing point, while the data vintage is the code that refers to a specific release of public LODES data.

The geography crosswalk is a relationship file that establishes the hierarchical connection between each 2010 census tabulation block and all higher level geographic entities supported by the OnTheMap application. The geography crosswalk file is distributed as a Gzipped (see below) CSV. More detail about this file, including the layout, is available in the Geography Crosswalk section below.

A typical directory tree looks as follows:

```
\
|-- ak
|   |-- od
|   |   |-- (individual origin-destination data files)
|   |-- rac
|   |   |-- (individual residence area characteristics data files)
|   |-- wac
|   |   |-- (individual workplace area characteristics data files)
|   |-- ak_xwalk.csv.gz
|   |-- lodes_ak.sha256sum
|   |-- version.txt
|-- az
|
| (more states)
```

For users who want to automate the download of LODES data files, the root location of the directory structure is lehd.ces.census.gov/data/lodes/LODES7/. This location can be accessed directly via a web browser. Additionally, users can direct their browsers to lehd.ces.census.gov/data/#lodes for single-file downloads.

All CSV files are compressed using a GZip algorithm, which appends a “.gz” to the end of the filename. Most commonly used compression/extraction software packages can decompress these files (see [en.wikipedia.org/wiki/Zip_\(file_format\)](http://en.wikipedia.org/wiki/Zip_(file_format))).

Data Coverage and Availability

Data are currently available for most states in most years. The LED Partnership has included 53 State and Territorial Partners.² With the exceptions listed in the table below 51 of states (or state equivalents) have OD, RAC, and WAC data for all 17 years of data (2002-2018).

Datasets for 2009-2018 contain additional variables (Race, Ethnicity, Education, and Sex) on the RAC and WAC files that are not available in other years of data.³ And datasets for 2011-2017 contain further additional variables (Firm Age and Firm Size) on the WAC files.^{4,5,6} The data structure for all years of data has been expanded to include space for these new variables, but in years outside the listed range these variables contain only zeroes. See the File Naming Conventions and File Structure section of this document for more information.

² List of current partner states available at https://lehd.ces.census.gov/state_partners/.

³ Race, Ethnicity, Educational Attainment, and Sex variables are made available through a Beta release.

⁴ Firm Age and Firm Size are made available through a Beta release.

⁵ Additionally, Firm Age and Firm Size are only made available for the All Private Jobs job type (JT02).

⁶ Due to a delay in input files, Firm Age and Firm Size are currently unavailable for 2018.

Datasets for 2010 through 2018 contain additional Job Types that cover Federal employment as supplied by the Office of Personnel Management (OPM). The data structure is outlined in the File Naming Conventions and File Structure segment of this document.

States and territories which are not in “regular production” do have RAC datasets available, however these only include jobs for workers employed in the 51 LODES/OnTheMap states and territories. The partners that are *not* in regular production for the purposes of LODES/OnTheMap are Puerto Rico and the U.S. Virgin Islands. Additionally, due to historical unavailability/data sharing limitations/significant QA issues, a handful of state-year combinations of data are *not* part of LODES/OnTheMap. These full list of missing state-year combinations is given in the table below:

State-Year Combinations without OD/WAC data	
State (or equivalent)	Years
Alaska	2017-2018
Arizona	2002-2003
Arkansas	2002
District of Columbia	2002-2009
Massachusetts	2002-2010
Mississippi	2002-2003
New Hampshire	2002
Puerto Rico	All Years
U.S. Virgin Islands	All Years

These specific state-year combinations will have only RAC files and not OD or WAC files, similar to those states not in regular production. For a state-year with a full complement of data, in 2009 and earlier there are 8 OD files, 40 RAC files, and 40 WAC files. From 2010 forward there are 12 OD files, 60 RAC files, and 60 WAC files. In some cases, individual files produced for a state-year combination may contain no data because there are no jobs in the specific combination of state-year-jobtype-filetype. When this occurs the individual file still exists, but only contains the file header as specified below.

Geography Vintage

LODES Version 7.5 is based on 2019 TIGER/Line shapefiles.⁶ The data are enumerated with 2010 census blocks. Prior to LODES Version 6.0, data releases used 2000 census blocks as the base vintage. Basic information on 2010 census blocks can be found at www.census.gov/programs-surveys/geography/geographies/reference-files.2010.html. General information on the relationships between 2000 census blocks and 2010 census blocks can be found at www.census.gov/geographies/reference-files/time-series/geo/relationship-files.html. The methods used to translate historical data into 2010 census blocks can be found at lehd.ces.census.gov/doc/help/onthemap/OnTheMap2010Geography.pdf.

Geography Crosswalk

Filenames of the geography crosswalk datasets are described by the following template:

[ST]_xwalk.csv.gz where

[ST] = lowercase, 2-letter postal code for a chosen state

As an example the geography crosswalk file for Michigan would be the file: mi_xwalk.csv.gz

Code Vintages

The primary key/identifier in the Geography Crosswalk is the 2010 Census Tabulation Block Code (tabblk2010). This code does not change between Decennial Censuses and can be used to link to the geocodes in the OD/RAC/WAC files. All other geographic codes in the crosswalk are “current” and represent the most recent definitions of the legal, statistical, or administrative areas as integrated into LODES and OnTheMap.

²² All codes are constructed to be nationally unique. For areas that do not have a FIPS or other identifier that is nationally unique, the State FIPS or both State and County FIPS codes are prepended to create uniqueness. Source information for each geography can be found at lehd.ces.census.gov/applications/help/onthemap.html#!geographic_data.

²³ States with At Large districts have a district code of “00”. State equivalents with Resident Commissioners or Delegates have a district code of “98”.
