For the next few questions, imagine that you are buying health insurance coverage only for yourself for next year. Imagine that you have a choice of three health insurance plans that are all offered by the same company and that the doctors and other health care providers you use are included in the networks for all three plans. Imagine your use of medical care next year will [If TQ94D=1: result in medical bills of \$1,000.] [If TQ94D=2 OR 3: result in medical bills of \$10,000.] When choosing a health plan it's important to think about the total yearly costs that you would expect to have to pay under the health plan, not just the premium you would have to pay every month. Which of the three health insurance plans shown in the table below do you think would best meet your health insurance needs?
